SUMMARY

Junior System Engineer with hands-on experience across Linux administration, Oracle enterprise systems, and virtualization. I am skilled in monitoring and troubleshooting Exadata, SPARC/X-Series, and Private Cloud Appliance (PCA) environments for banking and telecom clients. Strong in OS deployment and upgrades, storage (LVM/RAID/Multipath), networking (bonding/VLAN/DNS), SSL/TLS, and security hardening. Known for reliable 24x7 support, log analysis, and structured incident handling.

EXPERIENCE

Junior System Engineer

Express System Limited

September 2024 - Present

- Provide enterprise support on SPARC and X-Series Oracle systems for banking and telecom clients; participate in 24x7 on-call rotation.
- Monitor PCA, Exadata, and SPARC servers to detect anomalies via log/metric review; perform first-line diagnostics and escalate with context.
- Triage and remediate customer issues, coordinating with internal teams and vendors for timely resolution.
- Administered Oracle Solaris environments on SPARC infrastructure, managing ZFS file systems and configuring network interfaces to ensure high availability for mission-critical banking applications.
- Provisioned and managed Solaris Zones to isolate application environments, optimizing resource utilization across SPARC T-Series servers.
- Configured ZFS storage pools and datasets, implementing snapshots and replication strategies to ensure data integrity and rapid recovery.

IT Support Engineer

Cubix Technology

March 2024 - June 2024

- Supported hotel management software and databases; delivered client support, hardware/software setup, and network monitoring.
- Configured client environments and resolved user issues to improve system stability; produced operational reports.
- Implemented network monitoring solutions, identifying and resolving potential connectivity issues before impacted hotel operations.

IT Executive

Pacifist Corporation Group

September 2023 - February 2024

- Administered domain/server controls and DNS; executed scheduled server updates to improve uptime.
- Streamlined deployment and maintenance processes to enhance availability for enterprise applications.
- Established robust server update schedules and DNS administration, significantly enhancing enterprise application availability.

PROJECT

Oracle Database Appliance X11 High Availability

NRB Bank • April 2026 - June 2026

- OS install and configuration of Oracle Linux 8 on ODA X11 for HA cluster.
- Patch configuration of Oracle Exadata and ODA X11 to ensure system stability and security.
- Network Setup and HA configuration for Oracle RAC both DC and DR.

RDP Setup

Inovi Solutions • July 2025 - October 2025

- Engineered a robust Remote Desktop Protocol setup, enabling seamless remote access, strengthening security protocols, and optimizing performance for distributed teams.
- Integrated multi-factor authentication into the RDP setup, elevating security standards, minimizing unauthorized access risks, and bolstering compliance with industry regulations.
- Overhauled configuration management for the RDP environment by centralizing policy enforcement, ensuring consistent security updates, and simplifying administrative workflows.
- Modernized RDP infrastructure by incorporating automated monitoring tools, identifying vulnerabilities, and facilitating swift incident response to maintain optimal system integrity.

Virtual Machine Setup

Express System Limited

- Devised an automated provisioning system for cloud-based virtual machines, enabling rapid scaling, enhancing resource allocation efficiency, and standardizing deployment configurations across multiple environments.
- Engineered a cloud virtual machine setup that unified provisioning processes, ensured consistent environment configurations, and accelerated deployment timelines across diverse platforms.
- Formulated a robust cloud virtual machine architecture that centralized environment management, optimized resource utilization, and facilitated seamless integration with existing DevOps pipelines.
- Architected secure cloud virtual machine deployments utilizing tools such as VMware ESXi, Oracle VM, KVM/libvirt, and Microsoft Hyper-V, ensuring effective resource allocation and environment isolation.
- Modernized security protocols within the cloud virtual machine setup, fortifying data protection measures, minimizing vulnerability exposure, and aligning infrastructure with industry compliance standards.
- Refined monitoring and alerting mechanisms within the cloud virtual machine infrastructure, identifying performance bottlenecks, reducing downtime risk, and supporting continuous service reliability improvements.

EDUCATION

B.Sc. in Computer Science & Engineering

East West University • 2019-2023

Higher Secondary Certificate (HSC)

Rajuk Uttara Model College • 2017

Secondary School Certificate (SSC)

Ispahani Public School & College, Comilla • 2015

CERTIFICATIONS

Oracle Cloud Infrastructure Certified Foundations Associate

2025

MySQL Implementation Certified Associate

2025

Ethical Hacker – Team Matrix (Elite Hackers)

2022

SKILLS

Oracle Linux, RHEL, CentOS, Ubuntu Server/Desktop

Oracle Solaris 10/11 administration, ZFS storage management, Solaris Zones/Containers virtualization, LDOM Management and Service Management Facility (SMF) configuration. Installation & configuration, OS & kernel upgrades, systemd, journald, performance triage

LVM (PV/VG/LV, resize, snapshots), mdadm RAID (0/1/5/10), ext4/xfs/btrfs, iSCSI, Multipath

NIC teaming/bonding (active-backup, 803.3ad), VLANs, IPv4/IPv6, static routes, firewall (firewalld/ufw/iptables), DNS (BIND)

VMware ESXi, Oracle VM, KVM/libvirt, Microsoft Hyper-V

SELinux/AppArmor, SSH hardening, auditd, OpenSSL (CSR, self-signed, renewal)

Log analysis (journalctl/rsyslog), snapshots/rsync backups, basic Nagios/Zabbix/Prometheus

Oracle Database installation (11g/19c), basic MySQL administration
